### Abstract

Virtual space is one of the most important phenomena of human life today, which, like its philosophy, covers all periods of education, childhood, adolescence and adulthood, male and female gender, as well as various aspects of religious, educational, cultural, economic life, etc. has made an impact. Considering the changes and developments and the expansion of the range and scope of information, preparing a clear framework and determining regular intellectual limits and boundaries for the training of appropriate educators is a necessity that must be taken into account. The purpose of this research is to deal with the fundamentals of virtual space, how to acquire knowledge and create communication in this space, as well as the value and norm in it. This research was done with a descriptive-analytical method and the research findings indicate that the way of receiving information and its speed is different from the past. The example of the global infectious disease of Corona and receiving the message according to the existential, value-based philosophical structure, as well as knowledge about it, have important and fundamental effects on education and the way educators interact and communicate with their surroundings.

**Keywords:** virtual space, philosophical foundations, corona, communication.
